Polycarbonate Headlight Guard Cleaning Instructions

Clean your headlight guard using **ONLY** mild soap and water, dry with a soft cloth. For particularly stubborn bug guts, remove and soak in water, or place a wet soft towel on the lenses and allow to soften the debris.

DO NOT USE OTHER CHEMICALS to clean your headlight guard, such as windex, rubbing alcohol, acetone, simple green, ammonia, bike wash etc.

The polycarbonate plastic lenses are very tough and impact resistant, but will break down over time when exposed to harsh chemicals.

Tools necessary:

- ① 5.5mm nut driver
- ② 10mm open end wrench
- ③ blue thread locker
- ④ T30 Torx
- ⑤ T10 Torx

- ① Install four (4) rubber grommets into headlight guard. (A) Use care to not rip the rubber. **!TIP** a dab of water will help them slide into place. Install rubber strip on rear of top edge. (B) Peel protective cover from polycarbonate lens. Install lens as shown with (6) supplied screws, washers, and nuts. (C) Install each screw loose first, then tighten down evenly.

- ② Use T30 Torx and remove four screws shown. One each just in front of turn signal, and two more under front lower edge of headlight guard (these are at a slight angle).

- ③ Apply a small drop of loctite to the threads of each ball stud. Thread in each upper ball stud on side panels near turn signals. Place one 10mm spacer on remaining ball studs and thread in to holes under front fairing as shown. Tighten to 5Nm

- ④ Install headlight guard. **!TIP** A dab of water on each ball stud will help it fit in place easier with less wear on the rubber grommets.

CONGRATULATIONS!

You've completed your installation. If at any point you have questions about your installation or have any feed back for us, we'd love to hear it. A downloadable version of these instructions can be found at our web site. www.AltRider.com

After 5 hours or 100 miles of riding, check your newly installed equipment to ensure all hardware is secure.
