

INSTRUCTIONS FOR USING THIS GUIDE:

This guide should be used as a supplement to our fitment guide (cover options are listed based on your motorcycle) at dowcopowersports.com. Measure your vehicle carefully and use the chart below to help you determine the correct size cover for your motorcycle. Please take into consideration the accessories you have. You should order the cover *larger* than the dimensions of your motorcycle. Your cover should fit so that the cover *is not* touching the ground, preferably about 3"-6" off the ground. This will allow for air to circulate under the cover to help prevent moisture build up.

Please Note: Due to the nature of our overall cover designs, the exact measurements may vary depending on exactly which points you use to measure the cover. These dimensions are a guide, not exact measurements.
